

## A POWDERED FORMULATION OF ZEB TO BOOST SURVIVAL AND GROWTH RATES

Zeba® RD is a remarkable, patented cornstarch-based ultra-absorbent powder that provides transplants with a constant supply of moisture. The result is higher plant survival rates and consistently higher quality plants, even when moisture is limited.

### Zeba RD protects roots against dry conditions

- Reduces stress caused by heat and lack of moisture during hot, dry periods.
- Reduces nutrient leaching.
- Promotes greater plant root and biomass development.

**Zeba particles absorb in excess of 400 times their original weight in water**, forming hydrogels that slowly release the held moisture back to plants as they need it. After planting, Zeba easily rehydrates as more moisture enters the soil, repeating this process over and over again. Zeba also binds and releases water-soluble nutrients keeping more fertilizer inputs in the root zone and allowing less leaching. The healthy microenvironment created by Zeba keeps moisture where it is needed near plant roots, reducing bare root desiccation and transplant shock.

### APPLICATIONS

- Agricultural Crops
- Newly planted Trees and Vines
- Plant Beds and Landscaping
- Turf Seeding
- Shrub/Tree planting
- Soil Mixes
- Agricultural transplants

### KEY BENEFITS

- Faster plant starts
- Larger plants
- Reduced plant stress
- More consistent plant size and crop quality across fields
- Superior moisture retention capacity over peat, coir and other materials
- Reduces transplant shock during potting or plant installation
- Reduces nutrient leaching
- Higher quality, greater yields
