

ZEBA[®] XL

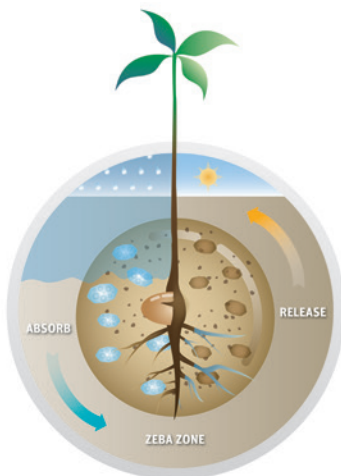

A LARGE GRANULE FORMULATION

Zeba[®] XL is a patented soil enhancement designed to keep a constant supply of moisture available to germinating seed, seedlings and plants throughout the growing season. It is ideal for use in a wide range of agricultural, turf and ornamental applications.

Zeba XL is a unique soil enhancement technology specifically designed for use in agricultural and horticultural settings. Zeba absorbs water in the soil and releases it back to plants when the soil dries and plants need moisture. With a steady supply of water, plants grow healthier, crops are more uniform and yields are increased.

The larger size particle of Zeba XL is ideal for most crop applications, as well as sod, tree and vine planting, and landscape bed applications.

Made from natural cornstarch, each Zeba granule works like a sponge, absorbing in excess of 400 times their original weight in water, forming hydrogels that slowly release nearly all of the held moisture as plants need it. Zeba also binds and releases water-soluble nutrients, keeping more fertilizer in the root zone and reducing leaching.

The healthy microenvironment created by Zeba keeps moisture where it is needed near plant roots and Zeba is capable of holding and releasing water over and over again through the growing season. Over time, Zeba is broken down naturally in the soil, leaving no residue behind.

APPLICATIONS

- Agricultural Crops
- Newly planted Trees and Vines
- Plant Beds and Landscaping
- Anti Crustant
- Turf Seeding
- Sod Installation
- Shrub/Tree planting
- Pot Transplants
- Soil Mixes

KEY BENEFITS

- Faster plant starts
- Larger plants
- Reduced plant stress
- More consistent plant size and crop quality across fields
- Increased soil porosity
- Longer irrigation intervals
- Water cost savings
- Reduced nutrient leaching
- Higher quality, greater yields
